identities helps authenticate, identify the user across devices. Refer AWS documentation - Cognito Developer Authenticated Identities Amazon Cognito supports developer authenticated identities, in addition to web identity federation through Facebook (Identity Pools), Google (Identity Pools), and Login with Amazon (Identity Pools). With developer authenticated identities, you can register and authenticate users via your own existing authentication process, while still using Amazon Cognito to synchronize user data and access AWS resources. Using developer authenticated identities involves interaction between the end user device, your backend for authentication, and Amazon Cognito.
