NEW QUESTION: 1What does the account group control when you create a new customer role in the business partner master?Please choose the correct answer.**A.** Number range**B.** Partner determination procedure**C.** Currency type**D.** Hidden fields**Answer: A**

NEW QUESTION: 2Which of the following commands can gather entries from the specified administrative NIS database group?**A.** rpcinfo group**B.** yppoll group**C.** ypserv group**D.** getent group**E.** ypbind group**Answer: D**

NEW QUESTION: 3**A.** Option C**B.** Option B**C.** Option A**D.** Option D**E.** Option E**F.** Option F
Answer: A,C,E**Explanation:**The OSPF protocol is based on link-state technology, which is a departure from the Bellman-Ford vector based algorithms used in traditional Internet routing protocols such as RIP. OSPF has introduced new concepts such as authentication of routing updates, Variable Length Subnet Masks (VLSM), route summarization, and so forth. OSPF uses flooding to exchange link-state updates between routers. Any change in routing information is flooded to all routers in the network. Areas are introduced to put a boundary on the explosion of link-state updates. Flooding and calculation of the Dijkstra algorithm on a router is limited to changes within an area.
