**NEW QUESTION: 1** Saving a custom report will save a snapshot of that data at a moment in time. True or False? **Answer:** Explanation: False. When saving a custom report you

**NEW QUESTION: 2** 展示を参照してください。192.168.101.2が失敗した場合、192.168.102.0/24のアクティブなネクストホップになるのはどのIPアドレスですか？ **A.** 192.168.101.10 **B.** 192.168.101.18 **C.** 192.168.101.6 **D.** 192.168.101.14 **Answer: B** **Explanation:** Explanation The '>' shown in the output above indicates that the path with a next hop of 192.168.101.2 is the current best path. Path Selection Attributes: Weight > Local Preference > Originate > AS Path > Origin > MED > External > IGP Cost > eBGP Peering > Router ID BGP prefers the path with highest weight but the weights here are all 0 (which indicate all routes that are not originated by the local router) so we need to check the Local Preference. Answer '192.168.101.18' path without LOCAL\_PREF (LocPrf column) means it has the default value of 100. Therefore we can find the two next best paths with the next hop of 192.168.101.18 and 192.168.101.10. We have to move to the next path selection attribute: Originate. BGP prefers the path that the local router originated (which is indicated with the "next hop 0.0.0.0"). But none of the two best paths is self-originated. The AS Path of the next hop 192.168.101.18 is shorter than the AS Path of the next hop 192.168.101.10 then the next hop 192.168.101.18 will be chosen as the next best path.
