Answer: C

NEW QUESTION: 2 Which of the following activities are performed by a desk?
1. Logging details of incidents and service requests
2. Providing first-line investigation and diagnosis
3. Restoring service
4. Implementing all standard changes
A. 3 and 4 only
B. 2 and 4 only
C. All of the above
D. 1, 2 and 3 only
Answer: D

NEW QUESTION: 3

あなたのチームは、新しい顧客ごとにシステム全体の展開を必要とするSaaSアプリケーションを実装しました。

インフラストラクチャのプロビジョニングはTerraformを介してすでに自動化されており、構成ファイルの管理とデプロイメントを一元化するためのAnsibleプレイブックを開発するように求められました。

プレイブックで最新かつ正確なインベントリを確実に利用するための最も効果的な方法は何ですか?
A.

コマンドラインインターフェイススクリプトを実装してすべてのリソースを一覧表示し、Ansible内で実行して動的インベントリリストを生成します。
B.

Terraform適用コマンドを使用してインベントリリストをエクスポートします。
C. Oracle Cloud Infrastructureによって提供される動的インベントリスクリプトをダウンロードし、それをPlaybook呼び出しコマンドに含めます。
D. Oracle Cloud Infrastructure

Webコンソールからインベントリリストをエクスポートします。
Answer: C

Explanation: Ansible tracks configuration resources by preserving lists, called inventory lists.

These inventory files can be either simple static lists, or they can be dynamic lists that automatically update when inventory resources are added, deleted, or moved.

When using Ansible to work with hosts that you have provisioned in Oracle Cloud Infrastructure, static inventory lists can cause problems because Compute instances are added and deleted over time.

They can also be affected by external tools such as Terraform, or by the Oracle Cloud Infrastructure SDKs.

Oracle Cloud Infrastructure provides two tools for working with Ansible inventory: a dynamic inventory plugin (recommended) and a dynamic inventory script.

Using the Dynamic Inventory Script Having up-to-date and accurate inventory lists is essential for running Ansible playbooks.

Oracle Cloud Infrastructure provides you with a script that you can download and run to ensure that your instance inventory list is always up-to-date. The script ensures that you always have the current set of Oracle Cloud Infrastructure compute instances available to your playbooks

NEW QUESTION: 4 DRAG DROP Your company plans to deploy a remote access solution to meet

the following requirements: Ensure that client computers that are connected to the Internet can be managed remotely without requiring that the user log on. Ensure that client computers that run Windows Vista or earlier can connect remotely. Ensure that non-domain-joined computers can connect remotely by using TCP port 443. You need to identify which remote access solutions meet the requirements. Which solutions should you identify? To answer, drag the appropriate solution to the correct requirement in the answer area. Each solution may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content. **Answer:** Explanation: Box 1: Direct Access Box 2: L2TP VPN Box 3: SSTP VPN Note: * Direct is supported in Windows 7 and newer so second answer is not correct it should be L2TP VPN. * DirectAccess, introduced in the Windows 7 and Windows Server 2008 R2 operating systems, allows remote users to securely access enterprise shares, web sites, and applications without connecting to a virtual private network (VPN). * Both L2TP and IPsec must be supported by both the VPN client and the VPN server. Client support for L2TP is built in to the Windows Vista and Windows XP remote access clients, and VPN server support for L2TP is built in to members of the Windows Server 2008 and Windows Server 2003 family. * Secure Socket Tunneling Protocol (SSTP) is a form of VPN tunnel that provides a mechanism to transport PPP or L2TP traffic through an SSL 3.0 channel. SSL provides transport-level security with key- negotiation, encryption and traffic integrity checking. The use of SSL over TCP port 443 allows SSTP to pass through virtually all firewalls and proxy servers.
