NEW QUESTION: 1 Which option specifies the number of days the dsmerror log is available?**A.** errorlogsize**B.** errorlogdays**C.** errorlogmax**D.** errorlogretention**Answer: D**

NEW QUESTION: 2 A user has been reporting their computer is running slow on Fridays after being used all week. A technician believes the problem can be resolved by rebooting the computer. Using the shutdown command in the command prompt on the remote computer, which of the following switches would the technician use to reboot the computer?**A.** -i**B.** -r**C.** -a**D.** -s**Answer: B**

NEW QUESTION: 3 **HOTSPOT** You have a Microsoft SQL Server instance that hosts a database named DB1 that contains 800 gigabyte (GB) of data. The database is used 24 hours each day. You implement indexes and set the value of the Auto Update Statistics option set to True. Users report that queries take a long time to complete. You need to identify statistics that have not been updated for a week for tables where more than 1,000 rows changed. How should you complete the Transact-SQL statement? To answer, configure the appropriate Transact-SQL segments in the answer area.**Answer:** Explanation: Explanation: Box 1: stats_date See example below. Box 2: rowmodctr See example below. Box 3: stats_date You need to identify statistics that have not been updated for a week. Box 4: rowmodctr You need to identify that more than 1,000 rows changed. Rowmodctr counts the total number of inserted, deleted, or updated rows since the last time statistics were updated for the table. Example: We will query every statistics object which was not updated in the last day and has rows modified since the last update. We will use the rowmodctr field of sys.sysindexes because it shows how many rows were inserted, updated or deleted since the last update occurred. Please note that it is not always 100% accurate in SQL Server 2005 and later, but it can be used to check if any rows were modified.--Get the list of outdated statistics
`SELECT OBJECT_NAME(id), name, STATS_DATE(id, indid), rowmodctr FROM sys.sysindexes WHERE STATS_DATE (id, indid) <= DATEADD(DAY, -1, GETDATE()) AND rowmodctr > 0 AND id IN (SELECT object_id FROM sys.tables) GO` After collecting this information, we can decide which statistics require an update. NEW QUESTION: 4 Your network contains a public computer that runs Windows 7. Multiple users log on to the computer by using a local user account named User1. Users report that they can log on to some secure Web sites by using credentials that were saved by other users. You need to prevent forms-based credentials from being saved on the computer. What should you do?**A.** Remove all Windows credentials from Windows Vault.**B.** Modify the Windows Internet Explorer AutoComplete settings.**C.** Modify the Windows Internet Explorer certificates settings.**D.** Remove all generic credentials from Windows Vault.**Answer: B** Explanation: AutoComplete settings AutoComplete is a feature in Internet Explorer that remembers the information you have typed into the Address bar, web forms, or password fields, and which automatically fills in that information if you start to type the same thing again later. This saves you from having to type the same information over and over.
