**NEW QUESTION: 1**Which of the following correctly describe steps in the OSI data encapsulation process? (Choose two)**A.** The data link layer adds physical source and destination addresses and an FCS to the segment.**B.** Packets are created when the network layer adds Layer 3 addresses and control information to a segment.**C.** The transport layer divides a data stream into segments and may add reliability and flow control information.**D.** Packets are created when the network layer encapsulates a frame with source and destination host addresses and protocol-related control information.**E.** The presentation layer translates bits into voltages for transmission across the physical link.**Answer: B,C****Explanation:**  
ExplanationExplanationThe transport layer segments data into smaller pieces for transport. Each segment is assigned a sequence number, so that the receiving device can reassemble the data on arrival.The transport layer also use flow control to maximize the transfer rate while minimizing the requirements to retransmit. For example, in TCP, basic flow control is implemented by acknowledgment by the receiver of the receipt of data; the sender waits for this acknowledgment before sending the next part.
