<https://docs.aws.amazon.com/codedeploy/latest/userguide/deployment-groups.html>"You can associate more than one deployment group with an application in CodeDeploy. This makes it

possible to deploy an application revision to different sets of instances at different times. For example, you might use one deployment group to deploy an application revision to a set of instances tagged Test where you ensure the quality of the code. Next, you deploy the same application revision to a deployment group with instances tagged Staging for additional verification. Finally, when you are ready to release the latest application to customers, you deploy to a deployment group that includes instances tagged Production. "
