NEW QUESTION: 1What module should and administrator utilize to identify inherent risk in cloud applications?**A.** Detect**B.** Protect**C.** Audit**D.** Investigate**Answer: C**

NEW QUESTION: 2Your installation has completed successfully and the system did not reboot automatically. Which option would cause this?**A.** The "auto_reboot" parameter in the Automated Installer manifest has not been set to "true."**B.** Post installation reboots are no longer necessary because the Oracle Solaris 11 Automated Installation installs and activates the system's services in the desired state such that there is no need for a reboot.**C.** The "installation" service needed to be refreshed for the "auto_reboot" setting is to be applied, so all clients being installed from it could reboot.**D.** Automatic reboots are only allowed when invoked via SMF.**E.** The client never reboots automatically after the successful installation, staying available for manually verification of the install process.**Answer: A****Explanation:** Explanation/Reference:auto_reboot - Optional. Omitting the auto_reboot attribute is equivalent to setting the value of the attribute to false. By default, AI does not automatically reboot the client after installation. To request automatic reboot of the client after successful installation, specify auto_reboot="true".**Note:*** Example 1 Set the auto_reboot Attribute\$ aimanifest set /auto_install/ai_instance@auto_reboot false**Reference:** Creating a Custom AI Manifest
