Up to now, we have made many achievements, It's very convenient for your C-WZADM-2404 exam prep.

**NEW QUESTION: 1**Why would having one farm with three configured sites, with one Provisioning Services server in each datacenter, meet the requirements of a regional, single-image management strategy with minimal WAN traffic across datacenters?**A.** It ensures that Provisioning Services targets will NOT load balance across regions, and reduces management overhead.**B.** It ensures that Provisioning Services targets will NOT load balance across regions, guarantees high availability within each region, and reduces management overhead.**C.** It ensures that Provisioning Services targets will NOT load balance between hosts and ensures high availability between regions.**D.** It ensures that Provisioning Services targets will NOT load balance between hosts and ensures high availability within each region.**Answer: D**

**NEW QUESTION: 2**Which two statements are true about the Oracle Cloud Infrastructure (OCI)? (Choose two.)**A.** An OCI region is a localized geographic area, and an availability domain is one or more data centers located within a region.**B.** A single fault domain can be associated with multiple regions and availability domains.**C.** Regions are dependent on other regions and must be located with 5 thousand kilometers of each other.**D.** Because availability domains do not share infrastructure such as power or cooling, or the internal availability domain network, a failure at one availability domain within a region is unlikely to impact the availability of the

others within the same region.**Answer: A,D**Explanation:ExplanationA region is a localized geographic area, and an availability domain is one or more data centers located within a region.Because availability domains do not share infrastructure such as power or cooling, or the internal availability domain network, a failure at one availability domain within a region is unlikely to impact the availability of the others within the same region.Oracle Cloud Infrastructure is hosted in regions and availability domains. A region is a localized geographic area. And an availability domain is one or more data centers located within a region.Our region is composed of one or more available domains. Most cloud infrastructure resources are either region-specific, such as virtual cloud networks, or availability-domain-specific, such as compute instance.Traffic between availability domains and between regions is encrypted. Availability domains are isolated from each other, fault tolerant, and very unlikely to fail simultaneously. Because availability domains do not share infrastructure such as power or cooling, or the internal availability domain network, a failure at one domain within a region is unlikely to impact the availability of the others within the same region.

**NEW QUESTION: 3**When a company moves from a traditional infrastructure to a hybrid infrastructure which group in IT is most positively affected?**A.** database operations**B.** network operations**C.** information security**D.** developers**Answer: C**
