Perform Outstandingly in Top Exams with Estruturit Like a Master.

**NEW QUESTION: 1**A security analyst has received several reports of an issue on an internal web application. Users state they are having to provide their credentials twice to log in. The analyst checks with the application team and notes this is not an expected behavior. After looking at several logs, the analyst decides to run some commands on the gateway and obtains the following output:Which of the following BEST describes the attack the company is experiencing?**A.** URL redirection**B.** MAC flooding**C.** ARP poisoning**D.** DNS hijacking**Answer: C**  
Explanation:ExplanationARP Poisoning (also known as ARP Spoofing) is a type of cyber attack carried out over a Local Area Network (LAN) that involves sending malicious packets to a default gateway on a LAN in order to change the pairings in its IP to MAC address table. Protocol translates IP addresses into MAC addresses.

**NEW QUESTION: 2**You need to track and report an additional level of detail for journal entries, tracking whether the adjustment came from the GL, legal, or other source.
