A. There is an HSRP group number mismatch
B. The ACL applied to

interface is blocking HSRP hello packet exchange**C**. There is an HSRP authentication misconfiguration**D**. HSRP group priority misconfiguration**E**. This is not an HSRP issue: this is DHCP issue.**Answer: B**
Explanation:Explanation
On R1 we see that access list 102 has been applied to the Ethernet 1/0 interface:This access list is blocking all traffic to the 224.0.0.102 IP address, which is the multicast address used by HSRP.

NEW QUESTION: 3You are designing an Azure application.The application includes services hosted in different geographic locations. The service locations may change.You must minimize the cost of communication between services.You need to recommend an approach for data transmission between your application and Azure services.The solution must minimize administrative effort. What should you recommend?**A**. Service Management API**B**. Service Bus **C**. Azure Table storage**D**. Azure Queue storage**Answer: B**
Explanation:Explanation/Reference:
Explanation:The cost of ACS transactions is insignificant when performing messaging operations against Service Bus queues. Service Bus acquires one ACS token per a single instance of the messaging factory object. The token is then reused until it expires, after about 20 minutes. Therefore, the volume of messaging operations in Service Bus is not directly proportional to the amount of ACS transactions required to support these operations.
