**NEW QUESTION: 1** Refer to the exhibit. AS #1 and AS #2 have multiple EBGP connections with each other. AS #1 wants all return traffic that is destined to the prefix 10.10.10.1/32 to enter through the router R1 from AS #2. In order to achieve this routing policy, the AS 1 advertises a lower MED from R1, compared to a higher MED from R3, to their respective BGP neighbor for the prefix 10.10.10.0/24. Will this measure guarantee that the routing policy is always in effect?  
**A.** Yes, because MED plays a deterministic role in return traffic engineering in BGP. **B.** Yes, because a lower MED forces BGP best-path route selection in AS #2 to choose R1 as the best path for 10.10.10.0/24. **C.** Yes, because a lower MED in AS #2 is the highest BGP attribute in BGP best-path route selection. **D.** No, AS #2 can choose to alter the weight attribute in R2 for BGP neighbor R1, and this weight value is cascaded across AS #2 for BGP best-path route selection. **E.** No, AS #2 can choose to alter the local preference attribute to overwrite the best-path route selection over the lower MED advertisement from AS #1. This local preference attribute is cascaded across AS #2 for the BGP best-path route selection. **Answer: E**  
**Explanation:** MED and AS path prepending can both be used to influence the way incoming traffic from other Autonomous Systems get sent to the local AS, but they provide no guarantee as the other AS ultimately has the final word in how they send traffic. Since local preference is preferred over MED in the BGP decision process, the other AS can configure local preference to override the MED settings you have configured.

**NEW QUESTION: 2** **A.** Option **B.** Option **C.** Option **D.** Option **D** **Answer: B, C**  
**Explanation:** By default, File History backs up all libraries. We can therefore ensure that Folder1 is protected by File History by adding the folder to a library. The second method of ensuring that Folder1 is protected by File History is to add the folder location to File History. You do this by modifying the Backup options, not the File History Control Panel item as you might expect. In the Settings app, select Update & Security then Backup. Under the Back up using File History heading, select the Add a drive option.

**NEW QUESTION: 3**An administrator is attempting to access an ESXi host via the DCUI but is unable to do so. Which could be two possible causes? (Choose two.)**A.** The host in question has no out-of-band management capability (i.e. iLO/iDRAC).**B.** Normal lockdown mode is enabled and the administrator is a member of the ExceptionUser list.**C.** The DCUI service is disabled on the host.**D.** Strict lockdown mode is enabled on the host.**E.** The SSH service is disabled on the host.**Answer: B,C**
