Das galt auch für meinen Bruder, noch einen Tag [ITIL-4-Foundation Deutsch](#) vor seinem Tod, Du armes Schneehöppli du sagte Heidi und drückte das Tierlein zärtlich an sich.

NEW QUESTION: 1You need to ensure that users do not need to re-enter their passwords after they authenticate to cloud applications for the first time.What should you do?**A.** Configure Azure Active Directory Sync to use single sign-on (SSO).**B.** Set up a virtual private network (VPN) connection between the VanArsdel premises and the Azure datacenter. Set up a Windows Active Directory domain controller in Azure VM.Implement Integrated Windows authentication.**C.** Deploy ExpressRoute.**D.** Enable Microsoft Account authentication.**Answer: A**Explanation: Single sign-on (SSO) is a property of access control of multiple related, but independent software systems. With this property a user logs in once and gains access to all systems without being prompted to log in again at each of them.References: http://en.wikipedia.org/wiki/Single_sign-on

=====Topic 1, VanArsdel, Ltd
OverviewVanArsdel, Ltd. builds skyscrapers, subways, and bridges. VanArsdel is a leader in using technology to do construction better.OverviewVanArsdel employees are able to use their own mobile devices for work activities because the company recognizes that this usage enables employee productivity. Employees also access Software as a Service (SaaS) applications, including DocuSign, Dropbox, and Citrix. The company continues to evaluate and adopt more SaaS applications for its business. VanArsdel uses Azure Active Directory (AD) to authenticate its employees, as well as Multi-Factor Authentication (MFA). Management enjoys the ease with which MFA can be enabled and disabled for employees who use cloud-based services. VanArsdel's on-premises directory contains a single forest.Helpdesk:VanArsdel creates a helpdesk group to assist its employees. The company sends email messages to all its employees about the helpdesk group and how to contact it. Configuring employee access for SaaS applications is often a time-consuming task. It is not always obvious to the helpdesk group which users should be given access to which SaaS applications. The helpdesk group must respond to many phone calls and email messages to solve this problem, which takes up valuable time. The helpdesk group is unable to meet the needs of VanArsdel's employees. However, many employees do not work with the helpdesk group to solve their access problems. Instead, these employees contact their co-workers or managers to find someone who can help them. Also, new employees are not always told to contact the helpdesk group for access problems. Some employees report that they cannot see all the applications in the Access Panel that they have access to. Some employees report that they must re-enter their passwords when they access cloud applications, even though they have already authenticated. Bring your own device (BYOD):VanArsdel wants to continue to support users and their mobile and personal devices, but the company is concerned about how to protect corporate assets that are stored on these devices. The company does not have a strategy to ensure that its data is removed from the devices when employees leave the company.Customer SupportVanArsdel wants a mobile app for customer profile registration and feedback. The company would like to keep track of all its previous, current, and future customers worldwide. A profile system using third-party authentication is required as well as feedback and support sections for the mobile app.Migration:VanArsdel plans to migrate several virtual machine (VM) workloads into Azure.

They also plan to extend their on-premises Active Directory into Azure for mobile app authentication.

Business Requirements

Hybrid Solution:

- * A single account and credentials for both on-premises and cloud applications
- * Certain applications that are hosted both in Azure and on-site must be accessible to both VanArsdel employees and partners
- * The service level agreement (SLA) for the solution requires an uptime of 99.9%
- * The partners all use Hotmail.com email addresses

Mobile App: VanArsdel requires a mobile app for project managers on construction job sites. The mobile app has the following requirements:

- * The app must display partner information.
- * The app must alert project managers when changes to the partner information occur.
- * The app must display project information including an image gallery to view pictures of construction projects.
- * Project managers must be able to access the information remotely and securely.

Security:

- * VanArsdel must control access to its resources to ensure sensitive services and information are accessible only by authorized users and/or managed devices.
- * Employees must be able to securely share data, based on corporate policies, with other VanArsdel employees and with partners who are located on construction job sites.
- * VanArsdel management does NOT want to create and manage user accounts for partners.

Technical Requirements

Architecture:

- * VanArsdel requires a non-centralized stateless architecture for data and services where application, data, and computing power are at the logical extremes of the network.
- * VanArsdel requires separation of CPU storage and SQL services

Data Storage: VanArsdel needs a solution to reduce the number of operations on the contractor information table. Currently, data transfer rates are excessive, and queue length for read/write operations affects performance.

- * A mobile service that is used to access contractor information must have automatically scalable, structured storage
- * Images must be stored in an automatically scalable, unstructured form.

Mobile Apps:

- * VanArsdel mobile app must authenticate employees to the company's Active Directory.
- * Event-triggered alerts must be pushed to mobile apps by using a custom Node.js script.
- * The customer support app should use an identity provider that is configured by using the Access Control Service for current profile registration and authentication.
- * The customer support team will adopt future identity providers that are configured through Access Control Service.

Security:

- * Active Directory Federated Server (AD FS) will be used to extend AD into Azure.
- * Helpdesk administrators must have access to only the groups of Azure resources they are responsible for.
- * Azure administration will be performed by a separate group.
- * IT administrative overhead must be minimized.
- * Permissions must be assigned by using Role Based Access Control (RBAC).
- * Line of business applications must be accessed securely.

NEW QUESTION: 2-- Exhibit --- Exhibit --Refer to the exhibit. When USER1 tried to access Server 1, he sees the shown message on his Steelhead Mobile Client. What statements are true? (Select 2)

A. "Optimization Status: Configuring " means that the user is making a change on his Steelhead Mobile client at that moment.

B. Any changes that are made on an active policy on the Steelhead Mobile Controller will only take effect after the client reboot.

C. Any changes that are made on an active policy on the controller will take effect immediately.

D. "Optimization Status: Configuring " means that the policy has been changed on the Steelhead Mobile Controller and is being downloaded into the client at that moment.

Answer: C,D

NEW QUESTION: 3A customer's environment consists of the following:

- Linux servers with an Oracle database
- Microsoft Windows with SQL
- Full weekly backups for Oracle with a one-month retention period
- Daily incremental with a two-week retention
- Full weekly backups for SQL with two retention periods

You collect the information in order to determine the capacity needed for an EMC Data Domain solution. Which calculation will show the best trade-off between retention and compression?

A. Calculations across a range of retention times

B. Calculations with longer retention times

C. Calculations with the compression rate for the database

D. Calculations with minimal compression rates

Answer: C
