NEW QUESTION: 1A. Option EB. Option DC. Option BD. Option AE. Option C**Answer: A,B**

Explanation:

<http://blogs.technet.com/b/jhoward/archive/2012/03/12/everything-you-wanted-to-know-about-sr-iov-in-hyper-v-part-1.aspx>Page 174 exam ref 70-410 book: Enabling SR-IOV is only available when creating a new virtual switch, you cannot modify an existing switch to use this optionExplanation:The first step when allowing a virtual machine to have connectivity to a physical network is to create an external virtual switch using Virtual Switch Manager in Hyper-V Manager. The additional step that is necessary when using SR-IOV is to ensure the checkbox is checked when the virtual switch is being created. It is not possible to change a "non SR-IOV mode" external virtual switch into an "SR-IOV mode" switch. The choice must be made a switch creation time . E: Once a virtual switch has been created, the next step is to configure a virtual machine. SR-IOV in Windows Server "8" is supported on x64 editions of Windows "8" as a guest operating system (as in Windows "8" Server, and Windows "8" client x64, but not x86 client). We have rearranged the settings for a virtual machine to introduce sub-nodes under a network adapter, one of which is the hardware acceleration node. At the bottom is a checkbox to enable SR-IOV.Note:*Steps: / SR-IOV must be enabled on virtual switch / Install additional network drivers in the guest OS / Enable SR-IOV within the VMs through Hyper-V Manager*Single Root I/O Virtualization (SR-IOV) is a standard introduced by the PCI-SIG that owns and manages PCI specifications as open industry standards. SR-IOV enables network traffic to bypass the software switch layer of the Hyper-V Virtualization stack to reduce the I/O overhead in this layer. It allows an SR-IOV virtual function of a physical network adapter to be assigned directly to a virtual machine to increase network throughput by reducing latency. Host CPU overhead also get reduced for processing network traffic.*The diagram below illustrates how SR-IOV allows virtual machines to directly address the physical NIC.Reference: Everything you wanted to know about SR-IOV in Hyper-V Part 5

NEW QUESTION: 2Your network contains an Active Directory domain named contoso.com. Client computers run either Windows 7 or Windows 8.You plan to implement several Group

Policy settings that will apply only to laptop computers. You need to recommend a Group Policy strategy for the planned deployment. What should you include in the recommendation? More than one answer choice may achieve the goal. Select the BEST answer. **A.** Security filtering **B.** Block inheritance **C.** WMI filtering **D.** Loopback processing **Answer: C** Explanation/Reference:

<http://www.discoposse.com/index.php/2012/04/05/group-policy-wmi-filter-laptop-or-desktop-hardware/> Another method to detect hardware as laptop only is to look for the presence of a battery based on the BatteryStatus property of the Win32_Battery class. By using the Win32_Battery class, we can search to see if there is a battery present. If the battery status is not equal to zero (BatteryStatus <> 0) then you know that it is a laptop.

NEW QUESTION: 3 Sampson Aerospace is a publicly-traded U.S. manufacturer. Sampson supplies communication and navigation control systems to manufacturers of airplanes for commercial and government use. The company operates two divisions: Commercial Operations and Government Operations. Revenues from the Government Operations division comprise 80% of Sampson's total company revenues. Revenues for other companies in the industry are also driven primarily by sales to the U.S. government. Sampson has gained a reputation for offering unique products and services. Sampson's market share has been increasing, and its net profit margin is among the highest in its industry. As part of its business strategy, Sampson seeks out opportunities to enhance internal growth by acquiring smaller companies that possess new technologies that would allow Sampson to offer unique products and services. To this end, Sampson CEO, Drew Smith, recently asked his acquisitions team to consider the purchase of a controlling interest in either NavTech or Aerospace Communications, both software applications firms. Smith provides his acquisitions team with an aerospace analyst's industry report that addresses many key issues within the industry. Selected passages from the report are reproduced below: Sales in the aerospace electronics industry depend primarily on government military spending, which, in turn, depends on defense budgets. Sales depend on commercial travel to a much lesser extent. The government defense spending budget outlook is fairly bleak as the current administration is looking for ways to reduce the budget deficit. We feel the commercial airline segment has more upside than downside, especially as the global economy improves, so we might see a gradual shift in industry focus toward the commercial airline sector. Companies that already have a foothold in the commercial sector are well-positioned to grow during the global recovery. Even so, companies in this industry will remain highly sensitive to government spending for their revenues. Research and development costs are high and the industry is highly capital intense. While there are only a few companies in this industry, good opportunities exist, especially for companies that have developed sustainable profits through wise acquisitions, cost containment, and the ability to secure long-term government contracts. Sampson Aerospace recently announced that it is reducing its investment return assumption on its pension assets from 6% to 5%, and that it has entered negotiations to possibly acquire controlling equity interests in communications software firms, NavTech and Aerospace Communications. NavTech recently has decided to capitalize a significant portion of its research and development expense, and Aerospace Communications has restructured and reclassified many of its leases from operating to financial leases. Sampson CEO Drew Smith recently announced that Sampson had dropped out of negotiations with Knowledge Technologies, claiming it was likely not a sustainable business model. Consensus forecasts for NavTech and Aerospace Communications are presented in Exhibit 1. It would be most appropriate to characterize Sampson's generic strategy for achieving superior performance as: **A.** focus **B.** differentiation **C.** cost leadership **Answer: B** Explanation/Reference: Explanation: Sampson's strategy is based around offering unique products and services, and their acquisition strategy also supports this. This is a strategy of differentiation and is apparently successful, since Sampson has increasing market share as well as high profit margins relative to the rest of the industry. Focus refers to a strategy based on capturing one particular segment of the market, and cost

leadership refers to a strategy of producing undifferentiated products at the lowest production cost in the industry. (Study Session II, LOS37.b)
