Contoso, LtdBackgroundOverviewContoso, Ltd., manufactures and sells golf clubs and golf balls. Contoso also sells golf accessories under the Contoso Golf and Odyssey brands worldwide.Most of the company's IT infrastructure is located in the company's Carlsbad, California, headquarters.Contoso also has a sizable third-party colocation datacenter that costs the company USD \$30,000 to \$40,000 a month. Contoso has other servers scattered around the United States.Contoso, Ltd., has the following goals:\* Move many consumer-facing websites, enterprise databases, and enterprise web services to Azure.\* Improve the performance for customers and resellers who are access company websites from around the world.\* Provide support for provisioning resources to meet bursts of demand.\* Consolidate and improve the utilization of website- and database-hosting resources.\* Avoid downtime, particularly that caused by web and database server updating.\* Leverage familiarity with Microsoft server management tools.InfrastructureContoso's datacenters are filled with dozens of smaller web servers and databases that run on under-utilized hardware. This creates issues for data backup. Contoso currently backs up data to tape by using System Center Data Protection Manager. System Center Operations Manager is not deployed in the enterprise.All of the servers are expensive to acquire and maintain, and scaling the infrastructure takes significant time.Contoso conducts weekly server maintenance, which causes downtime for some of its global offices. Special events, such as high-profile golf tournaments, create a large increase in site traffic. Contoso has difficulty scaling the web-hosting environment fast enough to meet these surges in site traffic.Contoso has resellers and consumers in Japan and China. These resellers must use applications that run in a datacenter that is located in the state of Texas, in the United States. Because of the physical distance, the resellers experience slow response times and downtime.Business RequirementsManagement and Performance Management\* Web servers and databases must automatically apply updates to the operating system and products.\* Automatically monitor the health of worldwide sites, databases, and virtual machines.\* Automatically back up the website and databases.\* Manage hosted resources by using on-premises tools.Performance\* The management team would like to centralize data backups and eliminate the use of tapes.\* The website must automatically scale without code changes or redeployment.\* Support changes in service tier without reconfiguration or redeployment.\* Site-hosting must automatically scale to accommodate data bandwidth and number of connections.\* Scale databases without requiring migration to a larger server.\* Migrate business critical applications to Azure.\* Migrate databases to the cloud and centralize databases where possible.Business Continuity and SupportBusiness Continuity\* Minimize downtime in the event of regional disasters.\* Recover data if unintentional modifications or deletions are discovered.\* Run the website on multiple web server instances to minimize downtime and support a high service level agreement (SLA).Connectivity\* Allow

enterprise web services to access data and other services located on-premises.\* Provide and monitor lowest latency possible to website visitors.\* Automatically balance traffic among all web servers.\* Provide secure transactions for users of both legacy and modern browsers.\* Provide automated auditing and reporting of web servers and databases.\* Support single sign-on from multiple domains.

**Development Environment**You identify the following requirements for the development environment:\* Support the current development team's knowledge of Microsoft web development and SQL Service tools.\* Support building experimental applications by using data from the Azure deployment and on-premises data sources.\* Mitigate the need to purchase additional tools for monitoring and debugging.\* System designers and architects must be able to create custom Web APIs without requiring any coding.\* Support automatic website deployment from source control.\* Support automated build verification and testing to mitigate bugs introduced during builds.\* Manage website versions across all deployments.\* Ensure that website versions are consistent across all deployments.

**Technical Requirement Management and Performance Management**\* Use build automation to deploy directly from Visual Studio.\* Use build-time versioning of assets and builds/releases.\* Automate common IT tasks such as VM creation by using Windows PowerShell workflows.\* Use advanced monitoring features and reports of workloads in Azure by using existing Microsoft tools.

**Performance**\* Websites must automatically load balance across multiple servers to adapt to varying traffic.\* In production, websites must run on multiple instances.\* First-time published websites must be published by using Visual Studio and scaled to a single instance to test publishing.\* Data storage must support automatic load balancing across multiple servers.\* Websites must adapt to wide increases in traffic during special events.\* Azure virtual machines (VMs) must be created in the same datacenter when applicable.

**Business Continuity and Support**Business Continuity\* Automatically co-locate data and applications in different geographic locations.\* Provide real-time reporting of changes to critical data and binaries.\* Provide real-time alerts of security exceptions.\* Unwanted deletions or modifications of data must be reversible for up to one month, especially in business critical applications and databases.\* Any cloud-hosted servers must be highly available.

**Enterprise Support**\* The solution must use stored procedures to access on-premises SQL Server data from Azure.\* A debugger must automatically attach to websites on a weekly basis. The scripts that handle the configuration and setup of debugging cannot work if there is a delay in attaching the debugger.

**NEW QUESTION: 2** DRAG DROP A company plans to use Operations Management Suite (OMS) to track configuration changes within virtual machines (VMs). You need to determine the change types that report differences when changes are found. Which action for each source type is performed by the OMS agent? To answer, drag the appropriate action to the data source. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Select and Place:

**Answer:** Explanation: Explanation/Reference: Explanation: MS Log Analytics performs Windows registry monitoring and tracking with the Change Tracking solution. The file tracking feature will track files on both Windows and Linux systems with the OMS agent installed.

**NEW QUESTION: 3** An administrator wants to locate and remove all unassigned directory numbers on the Cisco Unified Communications Manager system. Which method is the best method to accomplish this task? **A.** Choose Device > Device Settings > Device Defaults and use the wizard to locate and remove the orphaned directory numbers. **B.** Use the Dial Plan Installer to remove the directory numbers. **C.** Choose Device > Phone. Search all phones and remove the undesired directory numbers. **D.** Choose Call Routing > Route Plan Report, choose the Unassigned DN drop-down menu, and then remove all orphaned directory numbers. **E.** Use the

Disaster Recovery System to restore only valid directory numbers.**Answer: D**Explanation:Step 1 - Choose Call Routing > Route Plan Report.The Route Plan Report window displays. Use the three drop-down list boxes to specify a route plan reportthat lists all unassigned DNs.Step 2 - Three ways exist to delete directory numbers:a.Click the directory number that you want to delete. When the Directory Number Configuration window displays,click Delete.b.Check the check box next to the directory number that you want to delete. Click Delete Selected.c.To delete all found unassigned directory numbers, click Delete All Found Items.A warning message verifies that you want to delete the directory number.Step 3 - To delete the directory number, click OK. To cancel the delete request, click Cancel.
