<http://blog.schertz.name/2012/03/troubleshooting-lync-phone-edition-issues/> Testlet 1 Case Study This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other question on this case study.At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.To start the case studyTo display the first question on this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.OverviewGeneral OverviewContoso, Ltd., is a manufacturing company that has 4,000 employees. The company has a sales department, a marketing department, a research department, and a human resources department.Physical LocationsThe company has four offices. The offices are configured as shown in the following table:The New York office contains the main data center. Communications for all of the offices is routed through the New York office.All telephone calls from the Los Angeles office and the Miami office are routed through a public switched telephone network (PSTN) gateway in the New York office.All offices connect to each other by using a wide area network (WAN) link. Each office connects directly to the Internet.Existing EnvironmentActive Directory EnvironmentThe company has an Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a single domain. All domain controllers run Windows Server 2008 R2.Each office contains two domain controllers. Each office is configured as an AD DS site.Each office contains DHCP servers that run on 32-bit servers.Skype for Business Server EnvironmentThe company has nine servers. The servers are configured as shown in the following table:The company uses a SIP domain of contoso.com. The voice infrastructure is configured as shown in the following table:All users are enabled for Enterprise Voice. The company also contains the Edge environment configured as shown in the following table:The Miami office has a dial plan. The dial plan is configured as shown in the following table:The Skype for Business server configuration has five routes. Location-based routing is not configured. The routes are configured as shown in the following table:The PSTN usage for the users in the Los Angeles Office is configured as shown in the following table:Problem StatementsThe company identifies the following issues with the current infrastructure:Los Angeles users report that the audio quality during calls to the New York office is poor and that thecalls often disconnect.Users in the Miami office report that when their WAN link fails, they cannot establish calls to the PSTN.The Miami users report that they cannot call the Los Angeles users by using a five-digit internal phonenumber.RequirementsPlanned ChangesThe company plans to implement the following changes:Provide voice resiliency in all

of the offices if a WAN link fails. Implement Call Park. Implement an unassigned number range that has a voice announcement. Add an additional auto attendant. Implement a gateway in the Los Angeles Office that uses the local PSTN. Migrate several users to Skype for Business Online. The users will use instant messaging (IM) with Skype for Business users only. Client computers will use automatic configuration and open federation. The migrated users will use a SIP domain of cloud.contoso.com. Provide a backup route for each office if a gateway fails. Provide each office with access to the local PSTN. Technical Requirements The company identifies the following technical requirements: Enable five-digit internal dialing that uses the site code and the last four digits of the phone number range. Configure the New York gateway as the backup route for the local gateway in each office. Business Requirements Changes to the infrastructure must minimize the number of new servers deployed.

NEW QUESTION: 2 A user needs to put sensitive data in an Amazon S3 bucket that can be accessed through an S3 VPC endpoint only. The user must ensure that resources in the VPC can only access the single S3 bucket. Which combination of actions will meet the requirements? (select TWO.)
A. Modify the VPC peering configuration to only allow access to the S3 private Endpoint.
B. Configure the IAM policy attached to the S3 bucket to only allow access from the specific VPC.
C. Configure the VPC endpoint policy to only allow the VPC to access the specific S3 bucket.
D. Configure the bucket policy to only allow access through the S3 Private Endpoint.
E. Modify the VPC endpoint policy on the bucket to only allow the VPC to access it.
Answer: C,D
Explanation: A: bucket policy needed for restriction/allowing vpc endpoints
D: Vpc end point policy is needed.
Note :- vpc end point policy cannot override bucket policies. The access policy on the VPC Endpoint allows you disallow requests to untrusted S3 buckets (by default a VPC Endpoint can access any S3 bucket). You can also use access policies on your S3 buckets to control access from a specific VPC or VPC Endpoint.

NEW QUESTION: 3 An AWS partner company is building a service in AWS Organizations using its organization named org1. This service requires the partner company to have access to AWS resources in a customer account, which is in a separate organization named org2. The company must establish least privilege security access using an API or command line tool to the customer account. What is the MOST secure way to allow org1 to access resources in org2?
A. The customer should create an IAM role and assign the required permissions to the IAM role. The partner company should then use the IAM role's Amazon Resource Name (ARN) when requesting access to perform the required tasks.
B. The customer should create an IAM user and assign the required permissions to the IAM user. The customer should then provide the credentials to the partner company to log in and perform the required tasks.
C. The customer should provide the partner company with their AWS account access keys to log in and perform the required tasks.
D. The customer should create an IAM role and assign the required permissions to the IAM role. The partner company should then use the IAM role's Amazon Resource Name (ARN) including the external ID in the IAM role's trust policy when requesting access to perform the required tasks.
Answer: D

NEW QUESTION: 4

以下の各ステートメントについて、そのステートメントが正しい場合は「はい」を選択してください。そうでなければ、いいえを選択します。

注：それぞれ正しい選択は1ポイントの価値があります。**Answer:** Explanation:
