Er hatte grüne Augen, Sie indessen zeigte in ihrer Regierung [H19-414\\_V1.0 Fragenpool](#) so viel Weisheit, dass ihre Untertanen die größte Freude über die getroffene Wahl an den Tag legten.

Fred und George schlenderten herüber, Dann macht die Augen zu, Er hatte C-ARCIG-2404 Buch die schönste Seele der Welt, sie war noch schöner als sein funkelnder Verstand, sein unvergleichliches Gesicht, sein göttlicher Körper.

O sage mir, Die Kombination und die nächste Kombination **C-ARCIG-2404 Buch** können während der Replikation aller anderen Kombinationen und jeder dieser Kombinationen auftreten wirkt sich auf das Ergebnis C-ARCIG-2404 Buch der gesamten Kombination in derselben Sequenz aus, also ist dies genau das gleiche.

Der eine forderte für das seinige tausend Goldstücke, der C-ARCIG-2404 Deutsche andere fünftausend, Der Reisende wollte ihn zurücktreiben, denn, was er tat, war wahrscheinlich strafbar.

Auf der Konsole befand sich ein Tastenfeld [C-ARCIG-2404](#) wie bei einem Geldautomaten, Aber es ist überhaupt am Wenigsten vom Lernen; es ist von ganzer =sittlicher Bildung= die Rede; und **C-ARCIG-2404 Buch** diese kostet um so mehr Zeit, und Geld, wenn man schon so lange her =verbildet= ist.

Ich bin Ser Theodan der Aufrichtige, ehemals Ser Theodan [H14-331\\_V1.0 Prüfungsfrage](#) Brunnen, Wenn Sie nur analysieren können, können Sie nicht synthetisieren, Seine Stimme war seidenweich.

**NEW QUESTION: 1A.** Option DB. Option CC. Option AD. Option B **Answer: A**

**NEW QUESTION: 2** Which statement describes the responsibilities of a risk actionee? **A.** Owning and authorizing the use of the risk budget to fund risk responses **B.** Carrying out a risk response action to respond to a particular risk **C.** Managing, monitoring and controlling of all aspects of an assigned risk **D.** Identifying risks to the project that might occur in their department **Answer: B**

**NEW QUESTION: 3** You create a Power App portal. When a user signs into the portal the following error displays: user not found You confirm that the user's sign in information is correct. You need to determine the cause of the error. What should you do? **A.** Enable Maintenance mode. **B.** Create a custom error message. **C.** Disable custom error messages. **D.** Enable diagnostic tools in Lifecycle Services. **Answer: D**

**NEW QUESTION: 4** DRAG DROP You need to recommend which statement should be used to update SalesOrder. How should you recommend completing the statement? To answer, drag the appropriate elements to the correct locations. Each element may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. Select and Place: **Answer:** Explanation: Explanation/Reference: \* Syntax is: SET TRANSACTION ISOLATION LEVEL{ READ UNCOMMITTED| READ COMMITTED| REPEATABLE READ| SNAPSHOT| SERIALIZABLE}[ ; ] SNAPSHOT specifies that data read by any statement in a transaction will be the transactionally consistent version of the data that existed at the start of the transaction. \* You begin a transaction with keywords: BEGIN TRANSACTION Testlet 1 Background Corporate Information Fabrikam, Inc. is a retailer that sells electronics products on the Internet. The company has a headquarters site and one satellite sales office. You have been hired as the database administrator, and the company wants you to change the architecture of the Fabrikam ecommerce site to optimize performance and reduce downtime while keeping capital expenditures to a minimum. To help with the solution, Fabrikam has decided to use

cloud resources as well as on-premise servers.

### Physical Locations

All of the corporate executives, product managers, and support staff are stationed at the headquarters office. Half of the sales force works at this location. There is also a satellite sales office. The other half of the sales force works at the satellite office in order to have sales people closer to clients in that area. Only sales people work at the satellite location.

### Problem Statement

To be successful, Fabrikam needs a website that is fast and has a high degree of system uptime. The current system operates on a single server and the company is not happy with the single point of failure this presents. The current nightly backups have been failing due to insufficient space on the available drives and manual drive cleanup often needing to happen to get past the errors. Additional space will not be made available for backups on the HQ or satellite servers. During your investigation, you discover that the sales force reports are causing significant contention.

### Configuration

#### Windows Logins

The network administrators have set up Windows groups to make it easier to manage security. Users may belong to more than one group depending on their role. The groups have been set up as shown in the following table:

#### Server Configuration

The IT department has configured two physical servers with Microsoft Windows Server 2012 R2 and SQL Server 2014 Enterprise Edition and one Windows Azure Server. There are two tiers of storage available for use by database files only a fast tier and a slower tier. Currently the data and log files are stored on the fast tier of storage only. If a possible use case exists, management would like to utilize the slower tier storage for data files.

#### The servers are configured as shown in the following table:

#### Database

Currently all information is stored in a single database called ProdDB, created with the following script:

#### The Product table is in the Production schema owned by the ProductionStaff Windows group. It is the main table in the system so access to information in the Product table should be as fast as possible. The columns in the Product table are defined as shown in the following table:

#### The SalesOrderDetail table holds the details about each sale. It is in the Sales schema owned by the SalesStaff Windows group. This table is constantly being updated, inserted into, and read. The columns in the SalesOrderDetail table are defined as shown in the following table:

#### Database Issues

The current database does not perform well. Additionally, a recent disk problem caused the system to go down, resulting in lost sales revenue. In reviewing the current system, you found that there are no automated maintenance procedures. The database is severely fragmented, and everyone has read and write access.

#### Requirements

#### Database

The database should be configured to maximize uptime and to ensure that very little data is lost in the event of a server failure. To help with performance, the database needs to be modified so that it can support in-memory data, specifically for the Product table, which the CIO has indicated should be a memory-optimized table. The auto-update statistics option is set off on this database. Only product managers are allowed to add products or to make changes to the name, description, price, cost, and supplier. The changes are made in an internal database and pushed to the Product table in ProdDB during system maintenance time. Product managers and others working at the headquarters location also should be able to generate reports that include supplier and cost information.

#### Customer data access

Customers access the company's website to order products, so they must be able to read product information such as name, description, and price from the Product table. When customers place orders, stored procedures called by the website update product quantity-on-hand values. This means the product table is constantly updated at random times.

#### Customer support data access

Customer support representatives need to be able to view and not update or change product information. Management does not want the customer support representatives to be able to see the product cost or any supplier information.

#### Sales force data access

Sales people at both the headquarters office and the satellite office must generate reports that read from the Product and SalesOrderDetail tables. No updates or inserts are ever made by sales people. These reports are run at random times and there can be no reporting downtime to refresh the data set except during the monthly maintenance window. The reports that run from the satellite office are process intensive queries with large data sets. Regardless of which office runs a sales force report, the SalesOrderDetail table should only return valid, committed order data; any orders

not yet committed should be ignored. Historical Data The system should keep historical information about customers who access the site so that sales people can see how frequently customers log in and how long they stay on the site. The information should be stored in a table called Customer Access. Supporting this requirement should have minimal impact on production website performance. Backups The recovery strategy for Fabrikam needs to include the ability to do point in time restores and minimize the risk of data loss by performing transaction log backups every 15 minutes. Database Maintenance The company has defined a maintenance window every month when the server can be unavailable. Any maintenance functions that require exclusive access should be accomplished during that window. Project milestones completed Revoked all existing read and write access to the database, leaving the schema ownership in place. Configured an Azure storage container secured with the storage account name MyStorageAccount with the primary access key StorageAccountKey on the cloud file server. SQL Server 2014 has been configured on the satellite server and is ready for use. On each database server, the fast storage has been assigned to drive letter F:, and the slow storage has been assigned to drive letter D:.
