Meine Augenlider senkten sich, w Erwägen Sie die Möglichkeit, diese Architektur in D-DP-FN-23

Antworten vier Wänden zu verwenden, Er war sehr stark, Er huschte durchs Zimmer in den toten Winkel hinter der Tür, die im selben Moment auch schon aufgestoßen winde.

Ser Meryn Trant hielt Joffreys D-DP-FN-23 Fragen Beantworten Braunen, während der König aufstieg, lover Buhler, m.

NEW QUESTION: 1You create a new, empty database called 'test'. You want to change the database's CHARACTER SET to "latin1" and the database's COLLATION to 'latin_german_ci'. Which statement is true?
A. You cannot change the CHARACTER set or COLLATION value on an existing database.
B. You can do this one command: ALTER DATABASE test CHARACTER SET latin1 COLLATE latin1_german_ci
C. You can only do this with two separate commands: ALTER DATABASE 'test' CHARACTER SET latin1 ALTER DATABASE 'test' COLLATE latin_german1_ci
D. Databases do not have CHARACTER SET or COLLATION attributes.
Answer: B

NEW QUESTION: 2A company uses Dynamics 365 Field Service. The company plans to use built-in scheduling functionality. For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.
Answer: Explanation: Explanation

NEW QUESTION: 3You must create a services profile in Cisco Unified Communications Manager as part of the Jabber configuration. Which option is a UC service type?
A. VPIM
B. XML
C. LDAP
D. CTI
Answer: D

NEW QUESTION: 4You need to recommend a solution for deploying the web servers for the CRM application. The solution must meet the virtualization requirements. What should you include in the recommendation?
A. Network Load Balancing (NLB) without affinity
B. Failover Clustering with one active node
C. Network Load Balancing (NLB) with client affinity
D. Failover Clustering with two active nodes
Answer: C
Explanation: Explanation/Reference: Explanation:
The company identifies the following virtualization requirements:
Minimize the number of permissions and privileges assigned to users
Ensure that the members of a group named Group2 can add a WSUS server to the fabric
Ensure that a diagram view of the virtualization environment can be generated dynamically
Minimize the amount of administrative effort required to manage the virtualization environment
Prevent the failure of a front-end web server from affecting the availability of the CRM application
Ensure that the members of a group named Group1 can create new virtual machines in the Los Angeles office only
Only create virtual machine templates by using objects that already exist in the System Center 2012 Virtual Machine Manager (VMM) library
On the failover cluster in the main office, apply limited distribution release (LDR) updates to the virtualization hosts without disrupting the virtual machines hosted on the virtualization hosts

Testlet 1 General Overview
Proseware Inc., is a manufacturing company that has 4,000 employees. Proseware works with a trading partner named Fabrikam, Inc. Physical Locations
Proseware has a main office and two branch offices. The main office is located in London. The branch offices are located in Madrid and Berlin. Proseware has a sales department based in the London office and a research department based in the Berlin office. The offices connect to each other by using a WAN link. Each office connects directly to the Internet. Proseware rents space at a hosting company. All offices have a dedicated WAN link to the hosting company. Web servers that are accessible from the Internet are located at the hosting company.
Active Directory
The Proseware network contains an Active Directory forest named proseware.com. The forest contains a single domain. The forest functional level is Windows Server 2012. Each office contains three domain controllers. An Active Directory site is configured for each office. System state backups are performed every day on the domain controllers by using System Center 2012 R2 Data Protection Manager (DPM).
Virtualization
Proseware has Hyper-V hosts that run Windows Server 2012 R2. Each Hyper-V host

manages eight to ten virtual machines. The Hyper-V hosts are configured as shown in the following table. All of the Hyper-V hosts store virtual machines on direct-attached storage (DAS). Servers All servers run Windows Server 2012 R2. All of the servers are virtualized, except for the Hyper-V hosts. VDI1 and VDI2 use locally attached storage to host virtual hard disk (VHD) files. The VHDs use the .vhd format. A line-of-business application named SalesApp is used by the sales department and runs on a server named APP1. APP1 is hosted on HyperV2. A server named CA1 has the Active Directory Certificate Services server role installed and is configured as an enterprise root certification authority (CA) named ProsewareCA. Ten load-balanced web servers hosted on HyperV7 and HyperV8 run the Internet-facing web site that takes orders from Internet customers. System Center 2012 R2 Operations Manager is used to monitor the health of the servers on the network. All of the servers are members of the proseware.com domain, except for the servers located in the perimeter network. Client Computers All client computers run either Windows 8.1 or Windows 7. Some of the users in the London office connect to pooled virtual desktops hosted on VDI1 and VDI2. Problem Statements Proseware identifies the following issues on the network: Virtualization administrators report that the load on the Hyper-V hosts is inconsistent. The virtualization administrators also report that administrators fail to account for host utilization when creating new virtual machines. Users in the sales department report that they experience issues when they attempt to access SalesApp from any other network than the one in the London office. Sometimes, configuration changes are not duplicated properly across the web servers, resulting in customer ordering issues. Web servers are regularly changed. Demand for virtual desktops is increasing. Administrators report that storage space is becoming an issue as they want to add more virtual machines. In the past, some personally identifiable information (PII) was exposed when paper shredding procedures were not followed. Requirements Planned Changes Proseware plans to implement the following changes on the network: Implement a backup solution for Active Directory. Relocate the sales department to the Madrid office. Implement System Center 2012 R2 components, as required. Protect email attachments sent to Fabrikam that contain PII data so that the attachments cannot be printed. Implement System Center 2012 R2 Virtual Machine Manager (VMM) to manage the virtual machine infrastructure. Proseware does not plan to use private clouds in the near future. Deploy a new Hyper-V host named RESEARCH1 to the Berlin office. RESEARCH1 will be financed by the research department. All of the virtual machines deployed to RESEARCH1 will use VMM templates. Technical Requirements Proseware identifies the following virtualization requirements: The increased demand for virtual desktops must be met. Once System Center is deployed, all of the Hyper-V hosts must be managed by using VMM. If any of the Hyper-V hosts exceeds a set number of virtual machines, an administrator must be notified by email. Network administrators in each location must be responsible for managing the Hyper-V hosts in their respective location. The management of the hosts must be performed by using VMM. The network technicians in each office must be able to create virtual machines in their respective office. The network technicians must be prevented from modifying the host server settings. New virtual machines must be deployed to RESEARCH1 only if the virtual machine template used to create the machine has a value specified for a custom property named CostCenter' that matches Research'. The web site configurations must be identical on all web servers. Security Requirements Proseware identifies the following security requirements: All email messages sent to and from Fabrikam must be encrypted by using digital certificates issued to users by the respective CA of their company. No other certificates must be trusted between the organizations. Microsoft Word documents attached to email messages sent from Proseware to Fabrikam must be protected. Privileges must be minimized, whenever possible.
