You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.To start the case studyTo display the first question in this case study, click the button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the button to return to the question.**Overview**Contoso, Ltd. is a manufacturing company that has offices worldwide. Contoso works with partner organizations to bring products to market.Contoso products are manufactured by using blueprint files that the company authors and maintains.**Existing Environment**Currently, Contoso uses multiple types of servers for business operations, including the following:\* File servers\* Domain controllers\* Microsoft SQL Server serversYour network contains an Active Directory forest named contoso.com. All servers and client computers are joined to Active Directory.You have a public-facing application named App1. App1 is comprised of the following three tiers:\* A SQL database\* A web front end\* A processing middle tierEach tier is comprised of five virtual machines. Users access the web front end by using HTTPS only.**Requirements**

Currently, Contoso uses multiple types of servers for business operations, including the following:

- \* File servers
- \* Domain controllers
- \* Microsoft SQL Server servers

Your network contains an Active Directory forest named contoso.com. All servers and client computers are joined to Active Directory. You have a public-facing application named App1. App1 is comprised of the following three tiers:

- \* A SQL database
- \* A web front end
- \* A processing middle tier

Each tier is comprised of five virtual machines. Users access the web front end by using HTTPS only.

**Planned Changes** Contoso plans to implement the following changes to the infrastructure:

- \* Move all the tiers of App1 to Azure.
- \* Move the existing product blueprint files to Azure Blob storage.
- \* Create a hybrid directory to support an upcoming Microsoft Office 365 migration project.

**Technical Requirements** Contoso must meet the following technical requirements:

- \* Move all the virtual machines for App1 to Azure.
- \* Minimize the number of open ports between the App1 tiers.
- \* Ensure that all the virtual machines for App1 are protected by backups.
- \* Copy the blueprint files to Azure over the Internet.
- \* Ensure that the blueprint files are stored in the archive storage tier.
- \* Ensure that partner access to the blueprint files is secured and temporary.
- \* Prevent user passwords or hashes of passwords from being stored in Azure.
- \* Use unmanaged standard storage for the hard disks of the virtual machines.
- \* Ensure that when users join devices to Azure Active Directory (Azure AD), the users use a mobile phone to verify their identity.
- \* Minimize administrative effort whenever possible.

**User Requirements** Contoso identifies the following requirements for users:

- \* Ensure that only users who are part of a group named Pilot can join devices to Azure AD.
- \* Designate a new user named Admin1 as the service admin for the Azure subscription.
- \* Admin1 must receive email alerts regarding service outages.
- \* Ensure that a new user named User3 can create network objects for the Azure subscription.

**NEW QUESTION: 3** Jack Thomas and Tim Bentley are analysts for Bond Analytics (BA). BA provides bond analysis for mutual fund managers, hedge fund managers, and institutional money managers in the United States. BA specializes in the valuation of international bonds and callable bonds, using intrasector analysis to find undervalued bonds. In addition to valuing the bonds, they also advise clients on whether to hedge currency risk for international bonds. Thomas has been a particularly strong advocate of hedging the currency risk of international bonds, especially in emerging markets, using forward contracts when they are available. At a morning meeting, Thomas and Bentley are trying to decide whether to hedge the currency risk of a large issue of bonds from a Thai manufacturer of pressed steel, Nakhon Metals. The client considering purchasing the bonds is a large U.S. mutual fund, Epsilon Funds. Epsilon has started to explore the possibility of earning higher returns through currency management using forward contracts. Thomas and Bentley discuss the various hedges of currency risk for the Nakhon Metals bond. One possibility is using a forward hedge position on the Thai baht. A second possibility is using forward contracts where the baht is delivered for Korean won. Thomas states that the second hedge would be pursued if the won was expected to appreciate more against the U.S. dollar than the baht. In the second hedge, the manager would sell won for dollars at the future spot rate. Thomas and Bentley gather the following information on the expected changes in the various currencies, the 1-year cash rates in the respective countries, and the expected return on the Nakhon bond. Additionally, the Nakhon Metals bond has a duration of 7.30 and is being compared against a bond denominated in U.S. dollars, issued by Powhatan Industries. The Powhatan bond has a duration of 4.2 and a yield of 4.50%. Whichever bond is purchased will be held for the next year. Thomas projects that the yield for the Nakhon Metals bond is expected to increase by 15 basis points while the yield on the Powhatan Industries bond is expected to stay constant. The following day, Thomas and Bentley discuss the market for and valuation of callable and long duration bonds. They believe that interest rates are temporarily low and for this reason want to be careful about their bond investments. Although they could hedge interest rate risk, they prefer not to because they believe it reduces the ultimate long-term return. Thomas says that due to secular changes in the bond market, bonds with structures are expected to become more scarce. He says that the problem with callable bonds has been that they typically trade at a premium due to their scarcity. Bentley

states that bonds with long durations also trade at a premium because they are scarce as well. Thomas states that the performance of callables and non-callables may differ when interest rates change due to the inherent call risk. He discusses the relative performance under two scenarios: \* Scenario A: Interest rates are near coupon rates and fall for both callables and non-callables by the same amount. \* Scenario B: Interest rates are historically very low and rise for both callables and non-callables by the same amount. Based on interest rate expectations and ignoring currency effects, determine whether the Nakhon Metals bond or Powhatan Industries bond should be more attractive over the one-year time horizon. **A.** The Powhatan Industries bond should be more attractive. **B.** The Nakhon Metals bond should be more attractive. **C.** Neither bond should be more attractive. **Answer: A**

**Explanation:**

**Explanation/Reference:** Explanation: In breakeven rate analysis, the analyst determines the yield change that makes the returns on bonds equivalent. Recall that we hold the short duration bond constant and examine the yield change in the longer duration bond that would make the returns equivalent. To determine the yield change at which the investor would be indifferent between purchasing two bonds, we must first compare the bonds' yields over the holding period. Over the 1-year time horizon, the Nakhon Metals bond has a yield advantage of 0.70% (5.2% - 4.5%). For the returns to be equivalent over the 1-year time horizon (assuming the bonds are purchased at their current prices), the price for the Nakhon Metals bond must fall by 0.70%. For its price to fall, its yield must increase. The magnitude of the yield change is provided by rearranging the modified duration formula: So if the yield for the Nakhon Metals bond increases by 9.59 basis points and the yield for the Powhatan Industries bond remains constant, the returns for the two bonds will be equivalent over the next year. Given that the Nakhon Metals bond has an initial yield advantage of 0.70%, its return will be higher as long as its yield does not increase by more than 9.59 basis points over the next year. In this case, the yield on the Nakhon Metals bond is expected to increase by 15 basis points, so the Powhatan Industries bond is more attractive. (Study Session 10, LOS 31 -j)
