sagte Onkel Vernon ängstlich, Die spezifischen Strategien sind wie folgt.

NEW QUESTION: 1You need to generate the security report.What should you do first?**A.** From Update Services, configure reporting rollup.**B.** From Group Policy Management, run the Group Policy Results Wizard.**C.** From Windows Intune, configure an alert policy.**D.** From Configuration Manager, deploy a configuration baseline.**Answer: D**Explanation:

=====Topic 2, Litware, Inc.Case StudyOverviewLitware, Inc. is an international pharmaceutical company that has 1,500 employees, including a roaming sales staff of 30 users.Litware has a main office and two branch offices. The main office is located in Montreal.The branch offices are located in Toronto and Seattle. All of the offices connect to each other by using a WAN link.Existing EnvironmentActive DirectoryThe network contains one Active Directory forest named litware.com. The forest contains a single domain. All of the domain controllers reside in the Montreal and Toronto offices. All of the servers in the forest run Windows Server 2012 R2.Cloud EnvironmentEach user has a mailbox hosted in Microsoft Office 365. Directory synchronization is configured between Active Directory and Office 365. Litware uses Windows Intune to manage the client computers used by the remote sales users. Both cloud services use the same public domain of litware.com.Management InfrastructureLitware has a deployment of Microsoft System Center 2012 R2 Configuration Manager.The schema extensions for Configuration Manager are deployed.The deployment contains one primary site. Configuration Manager clients are installed on all of the physical client computers in the Montreal and Toronto offices.The relevant custom collections and custom Client Device Settings objects are configured as shown in the following table.The collection of IDMIF and NOIDMIF files is enabled for the client computers. Auto-creation of software metering rules is disabled.The sales users use Windows Phone devices. The devices are managed by usingMicrosoft Exchange Online.Windows Server and Client EnvironmentThe network contains the servers configured as shown in the following table.Server4 is used only by the users in the Seattle office to provide access to line-of-business applications.Server5 is used only to provide the users in the Toronto office with access to personal virtual desktops.The disks on Server11 are configured as shown in the following table.Server11 contains a copy of all the up-to-date Windows and Endpoint Protection definition updates in a share named Updates. The network contains the client computers configured as shown in the following table.Each sales user has administrative privileges on their laptop. All other users do not have administrative privileges on their computer.Application EnvironmentThe sales users use a third-party application named App1. App1 is installed by using aWindows Installer (MSI) package and a Windows Installer transform (MST). App1 updates are released in the MSP format. Updates for x86 and x64 platforms are released separately.Users in the Montreal office use several different versions of two applications named App2 and App3. The applications are configured as shown in the following table.Internet ConnectivityEach office has an Internet connection. Last month, Litware reconfigured its web proxies, enforcing user authentication from all on-premises systems when connecting to theInternet.Problem StatementsLitware identifies the following issues on the network:* There are compatibility issues between the applications that run on Server4.* An older version of App1 runs on some of the laptops of the

sales users.* Since the reconfiguration of the web proxies, Server3 and Server21 can no longer synchronize software updates. Requirements Business Goals As much as possible, Litware wants to minimize the costs associated with purchasing hardware and software. Planned Changes Litware plans to implement the following changes: * Use Configuration Manager to manage all physical computers, tablets, and phones. * Integrate Microsoft Application Virtualization (App-V) 5.0 with Remote Desktop Services (RDS) and Configuration Manager. * Replace the laptops of the sales users with tablets that run Windows 8.1 RT and make all of the sales applications available through Remote Desktop. General Requirements Litware identifies the following general requirements: * The amount of disk space used by virtual desktop infrastructure (VDI)-based virtual machines must be minimized. * The principle of least privilege must be used, whenever possible. * Administrative effort must be minimized, whenever possible. Application Requirements Litware identifies the following application requirements: * The Seattle office users must use RemoteApp to run all of their applications. Usage of the applications must be tracked. * All new applications must use App-V 5.0. Currently, App-V is not used on RDS servers. * App1 must be updated on the client computers of the sales users. * App2 and App3 must be metered. Device Requirements Litware identifies the following device requirements: * Windows Phone 8.1 devices are the only smart phones permitted to access email on the Litware network. * No additional software must be installed on the Windows Phone devices of the sales users. * Only the sales users must be able to enroll their Windows 8.1 RT devices for management. Compliance Requirements Litware identifies the following compliance requirements: * The compliance of the client cache size for Configuration Manager must be regularly evaluated by running a WMI query in the following format: * Configuration Manager must be able to generate license reconciliation reports for third-party applications installed on the desktop computers in the Montreal office. * Inventory of each Configuration Manager client in the Toronto office must include the phone number and the extension of the office in which the computer is located. * Configuration Manager inventory of the Montreal office must include photocopiers and a custom hardware WMI class for each client. * The impact of Configuration Manager inventory and software metering on the performance of client computers must be minimized. * On the client computers in the Toronto office, client health auto-remediation in Configuration Manager must be disabled. Configuration Manager Requirements Litware identifies the following requirements for Configuration Manager: * Configuration Manager application packages and software update packages must be stored on drive E of the distribution points. If drive E is full, packages must be stored on a drive that has the most available disk space, except for drive C. * All WAN and Internet traffic caused by the installation of the Configuration Manager clients, as well as the download of Endpoint Protection definition files and software updates, must be minimized. * Configuration Manager must be used to manage all of the physical client computers and the mobile devices. RDS servers and virtual desktops will not be managed by using Configuration Manager. * Configuration Manager software update points must be configured to allow synchronization and the download of software updates. * The number of changes to the Configuration Manager Default Client Settings must be minimized. * Server11 must be configured as a distribution point.

NEW QUESTION: 2

最近のセキュリティ違反により、大企業は自社の内部セキュリティポリシーを監査しました。侵害には、デフォルトの資格情報を悪用し、システム特権をさらに昇格させることにより、無人のコンピューターへの不正なユーザーのゲームアクセスが含まれていました。次のセキュリティ対策のうち、侵害を最も防止した可能性が高いのはどれですか？（2つ選択してください）。**A.** ログオン時間の制限 **B.** 無効なゲストアカウント **C.** アカウントロックアウトポリシー **D.** パスワードの有効期限 **E.** スクリーンセーバーのパスワードロック **F.** BIOSパスワード **Answer: B,E**

Answer: A,C,E

NEW QUESTION: 4 Universal Containers sells its products online using a system built on Force.com sites. The orders are captured and processed in Salesforce. The company uses an external marketing system and would like to make use of the customer data captured in Salesforce. The marketing system has REST API that can be used to push data into it. Which three options should a Technical Architect consider that do not require building custom web services on the marketing system? Choose 3 answers
A. Write a custom Apex web service, which will be called from the marketing system to retrieve customer data.
B. Use a middleware tool to pull customer data from Salesforce and push it to the marketing system on a daily basis.
C. Use Apex callout to send customer data from Salesforce to the marketing system.
D. Build a custom Java application using the Enterprise WSDL to pull data from Salesforce and push it to the marketing system.
E. Use outbound messages to send customer data from Salesforce to the marketing system.
Answer: B,C,D
