Der Gedanke an Jessica ließ meine Erwiderung gereizter klingen als nötig, Diese **Identity-and-Access-Management-Architect Deutsche Prüfungsfragen** Wesen haben tatsächlich nichts mit den Kindern des Mondes gemein, Durchht, wie er war, ergab er sich darein und setzte langsam seinen Rückweg fort.

**NEW QUESTION: 1** Universal containers is using a private sharing model. The US sales director needs full access to all records of the US sales representatives. How can this be accomplished?  
**A.** Place the US sales director in a queue with the US sales representative's  
**B.** Define a role hierarchy where the US sales representatives roll up to the US sales director  
**C.** Give the US sales director read/write/edit/delete object permissions on the profile  
**D.** Define a role hierarchy where the US sales director rolls up to the CEO  
**Answer: B**

**NEW QUESTION: 2** Which of the following is NOT a key recovery method?  
**A.** A message is encrypted with a session key and the session key is, in turn, encrypted with the public key of a trustee agent. The encrypted session key is sent along with the encrypted message. The trustee, when authorized, can then decrypt the message by recovering the session key with the trustee's private key.  
**B.** A secret key or a private key is broken into a number of parts and each part is deposited with a trustee agent. The agents can then provide their parts of the key to a central authority, when presented with appropriate authorization. The key can then be reconstructed and used to decrypt messages encrypted with that key.  
**C.** A message is encrypted with a session key. The session key, in turn, is broken into parts and each part is encrypted with the public key of a different trustee agent. The encrypted parts of the session key are sent along with the encrypted message. The trustees, when authorized, can then decrypt their portion of the session key and provide their respective parts of the session key to a central agent. The central agent can then decrypt the message by reconstructing the session key from the individual components.  
**D.** A message is encrypted with a session key and the session key is, in turn, encrypted with the private key of a trustee agent. The encrypted session key is sent along with the encrypted message. The trustee, when authorized, can then decrypt the message by recovering the session key with the trustee's public key.  
**Answer: D** Explanation:

Encrypting parts of the session key with the private keys of the trustee agents provides no security for the message since the message can be decrypted by recovering the key components of the session key using the public keys of the respective agents. These public keys are available to anyone. The other answers are valid means of recovering keys, since key recovery refers to permitting access to encrypted messages under predefined circumstances. Two of these answers are also called key encapsulation since the session key is encapsulated in the public keys of the trustee agents and, therefore, can be decrypted only by these trustee agents with their private keys.

**NEW QUESTION: 3** Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time. When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design. Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task. Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided. Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab. You may now click next to proceed to the lab.

Lab information Use the following login credentials as needed: To enter your username, place your cursor in the Sign in box and click on the username below. To enter your password, place your cursor in the Enter password box and click on the password below. Microsoft 365 Username: [email#160;protected] Microsoft 365 Password: oL9z0=?Nq@oxlf the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab. The following information is for technical support purposes only: Lab Instance: 11098651

You recently discovered that several users in your organization have permissions on the mailbox of another user in the organization. You need to ensure that Lee Gu receives a notification when a user is granted permissions on another user's mailbox. To answer the question, sign in to the Microsoft 365 portal. **Answer:** Explanation: See explanation below.

Explanation Create an activity alert

1. Go to <https://protection.office.com/managealerts>.
2. Sign in to Office 365 using your work or school account.
3. On the Activity alerts page, click + New. The flyout page to create an activity alert is displayed.
4. Complete the following fields to create an activity alert:
  - \* Name - Type a name for the alert. Alert names must be unique within your organization.
  - \* Description (Optional) - Describe the alert, such as the activities and users being tracked, and the users that email notifications are sent to. Descriptions provide a quick and easy way to describe the purpose of the alert to other admins.
  - \* Alert type - Make sure the Custom option is selected.
  - \* Send this alert when - Click Send this alert when and then configure these two fields:
    - Activities - Click the drop-down list to display the activities that you can create an alert for. This is the same activities list that's displayed when you search the Office 365 audit log. You can select one or more specific activities or you can click the activity group name to select all activities in the group. For a description of these activities, see the "Audited activities" section in Search the audit log. When a user performs any of the activities that you've added to the alert, an email notification is sent.
    - Users - Click this box and then select one or more users. If the users in this box perform the activities that you added to the Activities box, an alert will be sent. Leave the box blank to send an alert when any user in your organization performs the activities specified by the alert.
  - \* Send this alert to - Click Send this alert Recipients box and type a name to add a users who will receive an email notification when a user (specified in the Users box) performs an activity (specified in the Activities box). Note that you are added to the list of recipients by default. You can remove your name from this list.
5. Click Save to create the alert. The new alert is displayed in the list on the Activity alerts page. The

status of the alert is set to On. Note that the recipients who will receive an email notification when an alert is sent are also listed. References:
